Precisely Help Center	1
User interface enhancements	1
Workflow tokens	2
DataProfiles v2.0 API	2
Other changes	2
1.2 Corrected issues	2

# 1. Latest release

This document describes the enhancements and modifications included in the latest release of Data360 Govern, and highlights any changes that may affect your current implementation.

For information on previous releases, and for user and administration topics, please see the integrated product help. You can access the help by clicking the Help icon, positioned towards the right of the header bar.

## 1.1 What's new

### Precisely Help Center

Our documentation is moving to the new [Precisely Help Center](#), where you can more easily personalize your experience and provide feedback to us. Using the new Help Center, you can:

- Bookmark topics and create a personalized content library
- Save your searches and get alerts when content is added or changed
- Print selected topics
- Send feedback to us and rate content

There is no change in how to access the documentation, you can continue to click the links from the product and this will take you directly to the new Help Center. The Release Notes are also available from the new Help Center and in future releases we will no longer publish a separate Release Notes PDF.

### User interface enhancements

- When configuring diagram asset types, clicking on an asset now displays the configuration options in tabs, rather than in panels. For example, the **Field Definition** panel is now displayed as a tab when you select a diagram asset type.
- The full path of asset types is now included in the **Rebuild Partial Search Index** dialog on the **Administration > Settings** page, helping you to more easily locate the appropriate asset type. Additionally, the **Rebuild Partial Search Index** dialog now only shows the Status/Last Updated for any partial rebuild if it occurred within the last week.
- On the Configuration pages, for example **Configuration > Business Assets**, the **Open** and **Open in New Tab** options will now open the **Fields Definition** tab of the selected asset type. Previously, selecting one of these options opened the asset type list page.

## Workflow tokens

A new workflow token has been added to workflow forms and emails to enable you to include the email address of the user who initiated the workflow. The token name is:

[WORKFLOW\_INITIATOR\_EMAIL]

For more information, see the "Configuring email notifications" topic in the help.

## DataProfiles v2.0 API

Two optional fields have been added to the data profiling endpoints:

- `popularityCount` - Gives the number of queries on the asset. Field type = long.
- `isAuthorizedForPopularity` - States whether the user is authorized to access the `popularityCount` statistics. Field type = boolean.

The `percentileStatistics` attribute has been enhanced to accept decimal values.

For more information, see the Swagger documentation by navigating to **Administration > API** in the application.

## Other changes

- The description field on rule dimension reference lists has been converted from HTML to Simple Text. The Description field is now available to select from the **Available Field Tokens for Display Format**.
- When downloading custom export templates, a loading indicator is now displayed.
- You can now select Counter fields from the list of **Available Field Tokens** when editing the **Display Format** on an asset type.

## 1.2 Corrected issues

Issue summary	Issue number
Fixed an issue that caused relationship fields to show only the display value instead of the asset path.	GOV-20716
Fixed an issue on workflow transition conditions where value fields did not appear when HTTP request or response fields were selected.	GOV-20689

Issue summary	Issue number
Fixed a performance issue that was caused when asset list pages contained ownership lookup fields.	GOV-20676
Fixed an issue where certain details in the profiling side panel were not refreshed when the selected asset was changed.	GOV-20647
Fixed an issue with the asset link on workflow forms.	GOV-20629
Fixed a performance issue that was caused when selecting or moving items on a process diagram that contained nodes with big HTML data.	GOV-20607
Fixed an issue that prevented some items from being displayed in the breadcrumb for models.	GOV-20561
Fixed an issue that caused long names in filtered dropdown menus to wrap too soon.	GOV-20301
Fixed an issue that prevented field from relationship filtering from working correctly when the field was not set as <b>Is Listable?</b> on the asset type configuration page.	GOV-20761
Fixed an issue where non-admin users with Read Relationship access did not see the side panel on the <b>Relationships</b> tab.	GOV-20760
Fixed an issue that caused the page to scroll back to the top when expanding nodes on model and policy administration pages.	GOV-20725
Fixed an issue that prevented you from opening menu items when the left navigation panel was collapsed.	GOV-20681

If you encounter any technical issues, contact us at [support.precisely.com](https://support.precisely.com).
