Data360 Govern

Release Notes

December 9, 2022

Table of contents

1. Latest release	1
1.1 What's new	1
Language settings	1
Asset type description	1
Workflow tokens	1
User interface enhancements	2
Fields v2.0 API	2
1.2 Corrected issues	2

1. Latest release

This document describes the enhancements and modifications included in the latest release of Data360 Govern, and highlights any changes that may affect your current implementation.

For information on previous releases, and for user and administration topics, please see the integrated product help. You can access the help by clicking the Help icon, positioned towards the right of the header bar.

1.1 What's new

Language settings

By default, the language setting in Data360 Govern matches the language set in your browser. You can now override this behavior to choose to display the application in any of the supported languages. The supported languages are: Dutch, English, French, German, Italian and Spanish. Note that if your browser is set to an unsupported language, the application will be displayed in English.

For more information, see the "Overview of the user interface" topic in the help.

Asset type description

When configuring asset types, you can now choose whether to display the description, if there is one set.

Previously, the description was displayed when you hovered over a tooltip next to the asset type name. Now, the description is displayed under the asset type name, with a button allowing you to show or hide the text. You can define the name of the button and choose whether the text should be expanded or collapsed by default.

For more information, see the "Establish business asset types" topic in the help.

Workflow tokens

When working with HTTP Request and HTTP Response activities in workflows, output fields are now labeled with their respective activity name. This allows you to more easily identify specific activities if there are multiple HTTP activities in a workflow.

For more information, see the "Create a workflow that calls an external API" topic in the help.

User interface enhancements

- When configuring business asset types and technical asset types, clicking on an asset now displays the configuration options in tabs, rather than in panels. For example, the **Field Definition** panel is now the **Fields** tab for these asset types.
- To open a submenu from the navigation bar on the left of the screen, you now need to click the relevant arrow to the right of the item name. For example, click the arrow to the right of **Business Assets** to see a high level view of all of the assets in your business glossary. This change prevents the submenus from opening when you hover over the navigation bar, giving you the control to choose when you want to view the additional menu information. For more information, see the "Overview of the user interface" topic in the help.
- Previously, on model and policy type assets, the text in simple text fields did not wrap. This meant that in some cases the text was cut off from view. The text in these fields now wraps, which matches the behavior of HTML fields and simple text fields on other asset types.

Fields v2.0 API

A new PATCH endpoint has been added which allows you to specify properties to update on a field type:

```
PATCH /api/v2/fields
```

For more information, see the Swagger documentation by navigating to **Administration > API**.

1.2 Corrected issues

Issue summary	Issue number
Fixed an issue that caused some comments to be skipped when clicking Load more comments .	GOV-20464
Fixed an issue that caused reference link and user search results to link to the home page when using the global search.	GOV-20459
Fixed an issue where invalid XML characters in HTML fields caused the entire export to be empty. Invalid symbols are now ignored.	GOV-20440
Fixed an issue that prevented the Match all conditions and Match any condition labels from being displayed when editing a scoring measure.	GOV-20434

Issue summary	Issue number
Fixed an issue that caused a random color to be applied to the reference list badge if no color was set for any of the reference list items.	GOV-20433
Fixed an issue that prevented custom fields from being displayed in the Relationship tab of the Information side panel.	GOV-20430
Fixed an issue where clicking a scoring badge redirected you to the home page, instead of opening the Scoring tab.	GOV-20421
Fixed an issue that prevented some users from being able to change their password.	GOV-20413
Fixed an issue that caused duplicate records to be created when running a workflow with multiple Field Change steps executing in parallel. This issue caused assets to appear duplicated on GET Assets API calls.	GOV-20406
Fixed an issue that prevented colors from loading on process diagrams.	GOV-20366
Fixed an issue that prevented search results from being displayed correctly when searching for an item on the asset list page.	GOV-20253
Fixed an issue that caused the Alerts icon on diagrams to display red with an alert count when there were no alerts displayed in the Active Alerts panel. Fixed an issue that caused two arrows to be displayed on diagrams instead of one arrow.	GOV-20249
Fixed a performance issue that caused large lineage and impact diagrams to time out when filtering to show all descendants or only direct children.	GOV-19768
Fixed an issue that caused lineage diagram arrows to point in the wrong direction when expanding the diagram.	GOV-19766
Fixed an issue that caused workflow form activities to be displayed before the relevant users had been assigned.	GOV-20166
