Patch Contents

These patch release notes describe changes made to Infogix Platform® Release 9.6, build 9.6-15427.

This patch addresses the following software defect(s):

Issue Number	Details
IP-7430394	Defect: Fixed an issue with Calendars where an attacker could manipulate the calendar name to cause an XSS attack when the calendar is displayed. Also fixed an issue where producing a definition report could execute html that might be present in the description or name of an object like a calendar.
IP-7431	Defect: Corrected an issue where configuration properties containing sensitive information were included in jar files that were deployed to the ER Rich Client.

This patch is applicable for the following products:

☒ Assure DQ®

☐ Insight®

☒ ER®

☐ Perceive®

How to Install the Patch

Installation Preparation

Note: In the instructions below,

<product> represents the Infogix application.

- For Assure DQ®, use IA.
- For ER®, use ER.
- For Insight®, use II.
- For Perceive®, use IV.

<myConfigName> represents the name of your configuration.

- If you accepted the configuration name default, you do not have to add the `-c <myConfigName>` parameter.

Server Installation

The zip file IP-9.6-15427-5.zip contains everything you need to install this patch on the server.

1. Copy the zip file, IP-9.6-15427-5.zip, to the following folder:

`<install_folder>/Infogix/maintenance/updates`

If the server is on the UNIX® or Linux® platform, upload or FTP the zip file to the UNIX or Linux host in binary mode.

2. From `<install_folder>/Infogix/bin`, run the appropriate script:

for Windows

```
update-product.bat -c <myConfigName> apply IP-9.6-15427-5 <product>
```

for UNIX or Linux

```
./update-product.sh -c <myConfigName> apply IP-9.6-15427-5 <product>
```

Note: You do not have to apply this patch to each product separately. Applying the patch one time applies it to the platform for all the product configurations created within the installation directory.

You will, however, must run the `clean` and `deploy` scripts for each product.

3. If this is a new installation and you have not yet run the `deploy` script, skip the remaining steps and return to the installation process.

4. From the `<install_folder>/Infogix/bin`, run the appropriate script:

for Windows

```
clean.bat -c <myConfigName> <product>
```

for UNIX or Linux

```
./clean.sh -c <myConfigName> <product>
```

5. From `<install_folder>/Infogix/bin`, run the appropriate script:

for Windows

```
deploy.bat -c <myConfigName> <product>
```

for UNIX or Linux

```
./deploy.sh -c <myConfigName> <product>
```

6. Restart the Infogix product server(s).

Contact Us

If you encounter any technical issues, we recommend that you visit the support portal at support.infogix.com.

If your query has not been discussed previously, you can create a new topic and receive answers from our product experts.

Alternatively, you can log a support ticket:

1. Select **Sign in** from the top right corner of the screen.
2. If you have already registered, enter your **Email** and **Password**, then click the **Sign in** button. Or, if you are not a registered support portal user, click **Sign up**.
3. Once you have registered and signed in, select **Submit a request** from the top right corner of the screen.
4. Complete all fields, then click **Submit** at the bottom of the screen.
