What's new

Latest release - 11.0

This is a multi-tenant cloud release only.

Duplicate a case

Added the ability to duplicate a case to ease the creation of new cases in case management.

Add notes on a case

Users who do not have edit access to a case can now add notes, edit the notes and reply to them on the case. This is controlled by a setting on the **Edit Restriction** tab of the case store definition and allows users without edit access on a case to add a note for their observations.

Specify import and export criteria

When exporting items from the pipeline view, you now have the option to include items that are referenced by the selected items. Additionally, when you have chosen a high-level item to export or import, such as a pipeline, the system will allow you to filter and select only those items that you want to export or import.

Audit trail search filter

Added the ability to filter the audit trail by environment name, object type and object name.

Environment manager user role

Added a new Environment Manager user role. Administrators can assign environment groups to an Environment Manager.

Users with the Environment Manager role can access the **Admin > Schedules** and **Admin > Executions** pages.

Analysis save options

Added **Save Definition Only As** and **Save Definition and Data As** options to the **Save** button in the Analysis screen. Previously, if there were multiple users working on the same analysis, only one user could save and the other users received an error if they tried to save. This new feature allows other users to save their changes as a new analysis rather than lose their work.

Other changes

- The full gradle distribution needed for deployment is now included in the product distribution, reducing the need to provide internet access to external sites.
- Added a custom date range option to the **Executions** and **Audit Trail** date filter. This allows you to filter records between a given date range.
- Improved the usability of the **Group By Aggregation** dialog and **Compute Field** definition dialog.
- Improved the usability of the error details dialog by allowing you to change the relative size of the message and error text fields. Also added the ability to copy the details to your clipboard.
- Added the Item ID and Alternate ID to the **Settings** dialog on the **Pipelines** page, and added the Environment ID to the **Environments** page.
- HTTP security headers have been improved and HTTP OPTIONS requests have been disallowed on the home page.

Corrected issues

Issue Summary	Issue Number
Fixed an issue where the Pipelines screen was accessible to users who are not administrators or power users.	ISX-21872
Fixed an issue where non-administrators were able to promote stages in the pipeline tree.	ISX-21788
Modified Infinispan distributed cache configuration so it can function correctly.	ISX-11833
Fixed an issue where the header context menu was not shown on the Sample Data grid.	ISX-21762
Fixed an issue that caused an error when transferring metadata of data view fields for data views with more than 250 fields.	ISX-21906
Fixed an issue in GraphQL APIs where the returned records were incorrect when the 'first' or 'last' paging parameters exceeded the total number of records.	ISX-21858
